

Kauâ Victor

SENIOR SOFTWARE ENGINEER | OFFENSIVE SECURITY RESEARCHER

KV

SEC // ENG // 26

Brazil (UTC-3) | m2hczs@proton.me | m2hcz.github.io | github.com/m2hcz | @inf0secc

PROFILE

Senior software engineer and offensive security researcher with 12+ years of experience building production systems and assessing real-world software. Focused on AppSec, vulnerability research, secure backend architecture, and evidence-driven remediation.

CAREER SIGNALS

12+

YEARS
ENGINEERING

02

ASSIGNED CVEs

2.2B+

COMBINED
VISITS

C1

ENGLISH

CORE EXPERTISE

- Application Security
- Vulnerability Research
- Secure Code Review
- Reverse Engineering
- Exploit Development
- Backend Architecture
- Distributed Systems
- Server-Authoritative Design
- Anti-Cheat and Abuse Resistance

TECHNICAL STACK

LANG

Python, TypeScript, Rust, Go, C, C#, Lua/Luau, Bash, SQL

SEC

Burp Suite, Frida, Ghidra, Radare2, pwntools, Semgrep, Nmap, Wireshark

INFRA

Linux, Docker, Kubernetes, Terraform, Cloudflare, GitHub Actions, PostgreSQL, Redis

PORTUGUESE: NATIVE | ENGLISH: C1

EXPERIENCE

2017 - PRESENT | INDEPENDENT | REMOTE

Security Researcher & Application Security Engineer

- Maps attack surfaces, reviews source code, validates controlled proofs of concept, and coordinates responsible disclosure across web, API, CLI, and backend surfaces.
- Turns exploitability and architectural root cause into reproducible reports with clear impact, false-positive reduction, and remediation guidance.
- Research outcomes include two assigned high-severity CVEs and accepted findings across major public vulnerability programs.

2014 - PRESENT | MULTIPLE STUDIOS | REMOTE

Senior Backend & Roblox Engineer

- Architected distributed persistence, real-time networking, server-authoritative gameplay, anti-cheat controls, and live-ops pipelines for titles with 2.2B+ combined visits.
- Led backend engineering for Massacre and contributed production systems to Violence District, PlayBox!, Gothyc!, and Resenha e Games.

SELECTED SECURITY RESEARCH

CVE-2026-54094 | File Browser

HIGH | CVSS 7.5

Discovered a symlink scope bypass enabling reads, overwrites, and public sharing outside the authorized directory. Fixed in 2.63.14.

CVE-2026-28740 | Gitea Git LFS

HIGH | CVSS 7.1

Identified a cross-repository authorization flaw that exposed private LFS objects to users without source-repository access. Fixed by PR #38006.

GitHub CLI & Gemini CLI

RESPONSIBLE DISCLOSURE

Reported path traversal and Git hook injection in gh run download, plus three Gemini CLI findings affecting CI/CD and developer-tooling surfaces.

SELECTED PROJECTS

pathward

PYTHON | OPEN SOURCE

Defensive library for path traversal, symlink escape, Zip Slip, and TOCTOU protection, with 54 tests across Python 3.9-3.13.

ReconMapper v2

PYTHON | SECURITY TOOLING

Repeatable reconnaissance and attack-surface mapping with subdomain discovery, port scanning, and service fingerprinting.

NetSentinel & PhantomNet

LUAU | GAME SECURITY

Threat monitoring paired with a high-performance client-server networking library using compact synchronization and delta compression.
